Reini-1D

Multipurpose tool of pumps...

Reini submersible pumps are powerful, simple, and durable tools for transferring various liquids.

In agriculture and biogas plants, our pumps are used as slurry pumps. The Reini pump acts as a loading pump in several sludge trailer brands and as a feed pump in hose spreading systems and separator equipment.

In construction and flood protection, the tasks of pumps is transferring large volumes of water. Also, they are capable of meeting diverse needs in industrial plant maintenance tasks.

Reini submersible pumps are also a very handy in property management, infrastructure maintenance, and construction – you can use them to empty trenches and efficiently handle washing and irrigation tasks.

In the rescue sector, Reini pumps are used for transferring firefighting water, loading tanks and preventing flood damage. We also supply loading and firefighting pumps for forest firefighting applications.
